

Mission Scientist Report for 7 June 2013

Submitted by wpetersen on Fri, 06/07/2013 - 17:45

Date:

Friday, June 7, 2013 - 17:30

Discussion:

Scattered showers sampled by NPOL and D3R this morning early then a dry and boring day. XPOL comms all back up and radars working normally. 2DVDs comms were worked on- units are functioning fine.

NPOL was taken down twice to work on "sticky" mechanical switches. The desire is to have the mechanical switch working properly for some ALT scanning.

NPR reporter from Cedar Rapids visited the site today and we had some home-schooler's visit as well.

Looks like we are good to go for helium to support the sphere cal next week.
